

Intermediate QA engineer

Deploy is a technology agency that partners with creative and tech company clients, as well as start-ups from a variety of industries to deliver mission critical technology solutions.

Join us!

We are currently looking for a QA engineer for manual testing of mobile and web applications to work with us in building rich interactive experiences, essential to making sure the creative vision for an experience works seamlessly.

Responsibilities:

- Performing different kinds of tests (e.g. exploratory, regression, sanity, smoke test, etc.), tracking bugs and reporting on risks and issues
- Analyzing business requirements and writing test scenarios, test cases and test scripts according to the requirements, test methodology and procedures
- Working in a fast-paced environment and by agile principles - taking part in everyday scrum meetings as well as sprint plannings and demos
- Databases: experience with MySQL, PostgreSQL
- Jira – Reporting defects, fix verification and fix migration across environments

Qualifications:

- 2-3+ years experience in the job offered or in a similar QA role
- Apply testing strategies to desktop, responsive and native mobile applications (iOS and Android)
- Experience working with content management systems
- Ability to work in a dynamic, collaborative and team oriented environment
- Ability to work well with various project stakeholders both technical and non-technical alike
- Strong analytical, technical and problem-solving skills
- Degree in Computer Science or related field preferred

Yours benefits:

- Competitive salary
- Family atmosphere
- Good work/life balance
- Engaging projects
- Supportative management
- Downtown office location
- Work from home options

Deploy is an equal opportunity employer (EEO).
