

## UI Developer

Location: Belgrade, Serbia

### Description

If you are excited about all aspects of modern engineering, from writing great code to creating architectures, designing components, interacting with clients, and delivering a working system to production, then you are the kind of person we are looking for.

We help one of the largest financial companies on the East Coast to solve the challenging problems that affect the entire 1000+ person development organization. We develop ecosystems for Financial Advisers, which drives the business of the company. We are actively improving development processes by introducing Agile, test automation, TDD, and CI/CD processes. Our international team of 70+ professionals is distributed across 5 locations: in Krakow, PL, Belgrade, SRB, St Petersburg, RU, Saratov, RU, and Florida, US.

### Responsibilities:

- Develop clean, modular, and reusable code
- Innovate and enhance on-site functionality
- Participate in agile development processes in SDLC, including sprint planning, iterative development, estimations, and design sessions

## Requirements:

- Deep understanding of JavaScript Core
- Solid experience with Angular
- Strong markup skills (good knowledge of HTML, CSS, CSS frameworks and pre-processors, understanding of adaptive/responsive concept)
- Experience with version control and bug tracking systems
- Good communication skills and technical English
- Good problem-solving skills, initiative, and intellectual curiosity

## We offer:

- Competitive salary
- Work on bleeding-edge projects on a team of experienced and motivated engineers
- Flexible working hours
- Health insurance, benefits package, company-sponsored conferences, vacations
- Well-equipped office located in the center of the city

## About us:

Grid Dynamics is an engineering services company known for transformative, mission-critical cloud solutions for the retail, finance, and technology sectors. We have architected some of the busiest e-commerce services on the Internet, and have never had an outage during the peak season. Founded in 2006 and headquartered in San Ramon, California with offices throughout the US and Eastern Europe, we focus on big data analytics, scalable omnichannel services, DevOps, and cloud enablement.
