

# We are looking for a JAVASCRIPT DEVELOPER that wants to become a REACT NATIVE DEVELOPER

## Project Description

Our client works with health professionals and breastfeeding experts to help a modern generation of mothers in breastfeeding by creating a modern care relationship with high quality, relevant videos and support tools.

## How it works:

### 1. Sign up

First, a new account is created for the parent by their health professional

### 2. Personalised Program

A personalised program is then created from a content library of videos and information

### 3. Support

If the parent is having trouble they can chat to their health professional or volunteer community coach

### 4. Daily monitoring

To help everyone keep track of their progress the parent completes a daily survey

### 5. Update

The health professional or coach updates the program depending on the parents changing needs and growth of the baby

## Tech info:

Application architecture will be designed using the next-generation lightweight frameworks based on Java. The overall application architecture will consist of the following four deployment units:

- Restful API implemented using Spring Boot as the application backend. The API will be designed and implemented following the best industry practices. The JSON Web Token-based authentication schema will be used to enforce endpoint security. The application will be HIPAA and GDPR compliant.
- 3 mobile apps dedicated to the three user areas (Health Professionals, Coaches and Parents). All applications will be implemented using the React Native framework.

We are looking for a capable frontend developer with strong skills and proven experience who is interested in becoming a react native developer as well. We would like to invest our time and resources in you and help you acquire a new skill - react native. Become a part of a strong team with vast experience in software development, and develop your career working in an inspiring environment focused on education, personal growth, and client success.

#### Education and experience

- University degree in computer science (or equivalent)
- Minimum 3+ years with Javascript
- Experience with, React, webpack, yarn
- Experience with Agile methodologies (SCRUM) and fast-paced startup environments.
- Experience in native iOS and/or Android development, is a plus

#### Personal skills

- Strong communicator with analytical thinking
- Team player eager to learn and share the knowledge with the team
- Oriented to self-education and skills improvement

#### Benefits

- Excellent compensation package
- Positive company culture
- Team buildings and all that comes with the territory
- Monday breakfast, Friday lunch and beer
- Continuous training and education program
- Interesting projects with a high focus on quality
- Advancement opportunities based on performance
- Free coffee and subsidized non-alcoholic drinks
- Did we mention the beer?

Interested? Awesome!
