

We are looking for a JAVA DEVELOPER

We are a US based company, headquartered in San Francisco with a development center (Pamet d.o.o.) in Belgrade, Sava Center. With more than 300 tech solutions delivered over the past 15 years our deep expertise in software development allows us to provide one of the best products in the industry.

Project Description

Our client works with health professionals and breastfeeding experts to help a modern generation of mothers in breastfeeding by creating a modern care relationship with high quality, relevant videos and support tools.

How it works:

1. Sign up

First, a new account is created for the parent by their health professional

2. Personalised Program

A personalised program is then created from a content library of videos and information

3. Support

If the parent is having trouble they can chat to their health professional or volunteer community coach

4. Daily monitoring

To help everyone keep track of their progress the parent completes a daily survey

5. Update

The health professional or coach updates the program depending on the parents changing needs and growth of the baby

Tech info:

Application architecture will be designed using the next-generation lightweight frameworks based on Java. The overall application architecture will consist of the following four deployment units:

- Restful API implemented using Spring Boot as the application backend. The API will be designed and implemented following the best industry practices. The JSON Web Token-based authentication schema will be used to enforce endpoint security. The application will be HIPAA and GDPR compliant.
- 3 mobile apps dedicated to the three user areas (Health Professionals, Coaches and Parents). All applications will be implemented using the React Native framework.

We are looking for Java Backend Developers to join us in our Belgrade office and work with our team on different projects for large international clients. Your primary responsibilities will include development and maintenance of back-end REST services, Integration with other back-end services/modules and development and maintenance of data transformation processes. A commitment to collaborative problem solving, sophisticated design and quality product are essential.

Education and experience

- University degree in computer science (or equivalent)
- 3+ years of Java development experience

Technology skills

- Experience with Java and related frameworks: Spring MVC, Spring Boot, Spring Data, Hibernate, JPA, JDBC, JOOQ
- Experience with relational database management systems and SQL
- Experience with web services (SOAP and REST), XML, JSON
- Experience with GIT and SVN source control systems
- Experience with Maven, Gradle, Jenkins and other CI tools
- Experience with Agile development practice

Bonus skills

- Knowledge of Groovy/Grails
- Knowledge of Kotlin
- Knowledge of Node JS

Personal skills

- Strong communicator with analytical thinking
- Team player eager to learn and share the knowledge with the team
- Oriented to self-education and skills improvement

Benefits

- Excellent compensation package
- Positive company culture
- Team buildings and all that comes with the territory
- Monday breakfast, Friday lunch and beer
- Continuous training and education program
- Interesting projects with a high focus on quality
- Advancement opportunities based on performance
- Free coffee and subsidized non-alcoholic drinks
- Did we mention the beer?

Interested? Awesome!
