

BI Developer

We are looking for an experienced Developer to strengthen our BI & Data Science team based in Copenhagen and Niš.

Better Collective is an eight-time Børsen Gazelle winner developing award-winning products with the vision of making gambling entertaining, transparent and fair.

In Better Collective we are more than 280 dedicated and talented employees across Europe working together in a dynamic, energetic and diverse work environment encouraging an open and informal tone, strong unity and high ambitions.

Important note: Daily work takes place in the office of Niš, Serbia. No admissions for remote work will be considered and thus you have to be present in the offices of Better Collective when working.

The role:

Working as a developer you will play an important role in BI & Data Science. You will work closely with an experienced BI architect and a BI developer located in Copenhagen. Your primary responsibility will be to further develop, optimize and ensure the development of QA processes of our native Scraping tool, which plays an extremely important role in our BI & Data Science setup. Moreover, you will take part in ensuring integration between M&As and asset purchases and Better Collective.

Responsibilities:

- ◇ Further develop and refine our internal core systems and ETL process.
- ◇ You will help improving and optimizing our data collection system built on Laravel, and keep the system operational and current with security requirements and up to date technologies.
- ◇ This position is primarily focused on back-end development.
- ◇ Further professionalize our native scraping tool to the next level to be able to deliver the highest quality of reliable data and figures to the entire organization.
- ◇ Moreover there can be various tasks of helping your colleagues with database queries, explaining and extracting data, etc.

Your profile:

- ◇ Experience with the LAMP (Linux, MySQL, PHP) technology stack, and other web development skills including HTML, CSS, and JavaScript/jQuery
- ◇ Understanding of Service-Oriented Architecture, XML, REST, JSON, and/or other Web Services technologies
- ◇ Proficient understanding of code versioning tools, such as
- ◇ Experience with traditional databases, such as MySQL
- Knows his/her way around a unix terminal
- ◇ Has a high level of commitment, engagement and motivation

We are looking forward to hearing from you as soon as possible and we accept applications until 30th of April 2019 via link
